

# Pressure Regulator RB 1200

- ▶ For residential application
- ▶ Angle or in-line design
- ▶ Integral shutoff valve
- ▶ Internal relief
- ▶ Inlet strainer
- ▶ Adjustable on site

## Applications

The RB 1200 regulator is designed for residential and light commercial applications. Its valve design makes it specially adequate for medium pressure service lines where it accommodates large inlet pressure variations while keeping very constant outlet. The RB 1200 offers two connection styles providing flexibility for meter mounting or integration in compact meter boxes.

## Description

The RB 1200 regulator is a spring-loaded self operated regulator with internal relief and safety shut-off device. It is fitted an inlet strainer. The safety shut-off valve cuts the gas flow when the outlet pressure exceeds the set pressure (OPSO) or when it drops below the set value (UPSO). It remains closed until the valve is manually reset. Its internal relief valve (SRV) avoids triggering the safety shut-off valve in case of thermal expansion, transient surges of pressure and creep leaks from regulator.

## Technical features

Maximum inlet pressure	10 bar
Outlet pressure	13 mbar – 135 mbar
Accuracy & lock-up pressure	Up to AC5 / up to SG10
Operating temperature	-20°C to +60°C
Acceptable gases	Natural gas, propane, butane, air, nitrogen
Safety devices	Standard relief valve Optional built-in safety shut-off valve: – Over-pressure shut-off (OPSO) – Under-pressure shut-off (UPSO)

## Sizes & Connections

Sizes	DN 20 combi-body or DN 32 in-line body
Connection	Combi-body: internal thread ISO 7 - Rp 3/4 In-line body: external thread ISO 7 - Rp 1 1/4

## Materials

Body/Actuator	Die cast aluminium
Seals	Nitrile
Diaphragms	Nitrile

## Option Designations

RB 1210	with SRV
RB 1211	with OPSO and SRV
RB 1212	with OPSO, UPSO and SRV

▶ RB 1200 with built-in safety shutoff valve

## Operating principle

The pressure reduction takes place between seat and tubular nozzle (1). The valve disc position is controlled by the diaphragm (2) which senses the **outlet pressure** on one side and is loaded by the spring (3) on the other side. Spring load is adjustable by the nut (4). The cap (5) can be **sealed** to avoid unauthorized intervention.

By design the tubular nozzle is balanced against inlet pressure differentials.

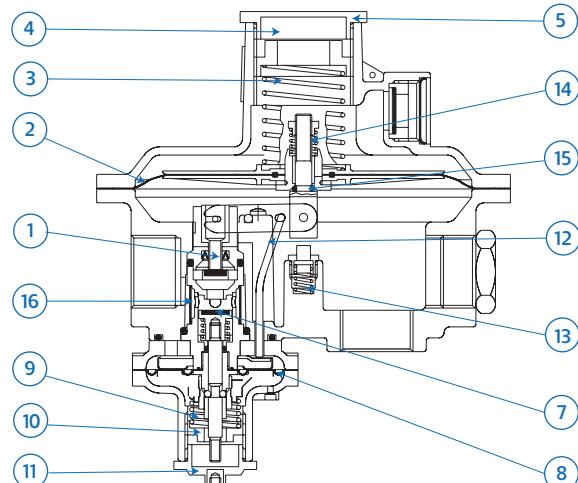

### Safety

The slam shut valve (7) shuts the gas flow off tight in case of **excess** of outlet pressure, which is sensed by the diaphragm (8). The load of the shut-off valve spring (9) is adjustable by the nut (10). The cap (11) can be **sealed** to avoid unauthorized intervention.

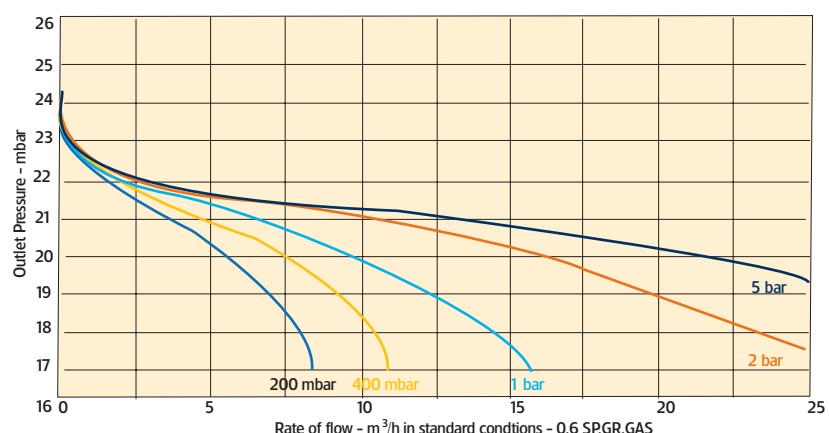

Optionally, the rod (12) actuated by the diaphragm assembly triggers the slam shut valve when **outlet pressure drops** below outlet set such as to overcome the load of spring (13). The set point is factory preset and cannot be adjusted on site.

A **safety relief valve** is integrated in the diaphragm assembly. When the outlet pressure build-up over set point exceeds the load of the spring (14), the diaphragm plate travels while the stem is stopped, thus opens passage between orifice (15) and plug. Gas is relieved to atmosphere through the breather tap. A strainer (16) - 100 µm - protects the regulator on the inlet side.

## RB1200 Sectional View

## Typical Regulation Curve (22 mbar set point)

## Flow Capacity

RB 1200 set at 22 mbar - model with built-in SSV

Inlet Pressure	Capacities (m³/h) in standard conditions
200 mbar	7
400 mbar	10.5
1 bar	14
2 bar	20
4 bar	30

Capacities at 4 mbar droop.

## Outlet pressure range

### Regulator

Spring Code	Spring Characteristics				Spring Range
	d mm	De mm	Lo mm	It	
20564241	1.5	30	80	9.5	13 - 20 mbar
20564141	1.6	30	80	9.5	18 - 29 mbar
20564243	1.7	30	80	7.5	27 - 46 mbar
20564142	1.8	30	80	8.5	31 - 52 mbar
20564050	1.8	30	100	10	45 - 60 mbar
20564051	2	30	100	11.5	60 - 85 mbar
20564044	2.2	30	80	9	82 - 135 mbar

### Shut-off valve

#### Over-pressure shut-off springs (OPSO)

Spring Code	Spring Characteristics				Spring Range
	d mm	De mm	Lo mm	It	
20561915	0.9	18	25	6.5	30 - 41 mbar
20562018	1	18	25	6.5	38 - 56 mbar
20562015	1	18	30	6.5	55 - 80 mbar
20562020	1.1	18	30	6.5	70 - 120 mbar
20562019	1.2	18	25	5.5	115 - 135 mbar

#### Under-pressure shut-off springs (UPSO)

The set point of the under-pressure shutoff valve is not adjustable and is preset from factory. The differential pressure between regulator and UPSO set points is indicated in the following table. The level of pressure differential - low, medium, high - can be selected to suit the application.

Reg Spring Differential (mbar)			Reg Spring Differential (mbar)		
Code	Low	Med	High	Code	Low
20564241	8	15	20	20564050	20
20564141	10	20	25	20564051	25
20564243	25	35	40	20564044	30
20564142	20	30	35		

### Relief valve

Spring Code	Relief set pressure*
955-203-36	10 mbar over set point

\* Other settings on request

### Spring characteristics:

d : wire diameter

De : external diameter

Lo : height

It : number of spires

### Standard conditions:

- Absolute pressure of 1.013 bar
- Temperature of 15°C

### Correction factor for

#### non-natural gas applications:

The flow rates are indicated or a 0.6 specific gravity gas.

To determine the volumetric flow rate for gases other than natural gas, the values in the capacity tables should be multiplied or calculated using the sizing equations with a correction factor.

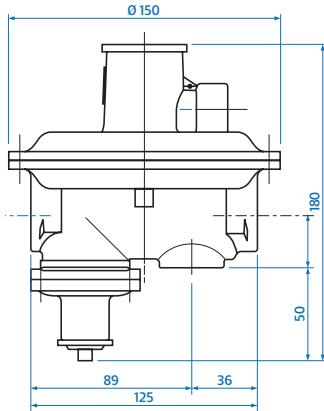

The table below lists the correction factors for some common gases:

Gas type	Specific gravity	Correction factor
Air	1.00	0.77
Butane	2.01	0.55
Carbon dioxide (dry)	1.52	0.63
Carbon monoxide (dry)	0.97	0.79
Natural gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air mix	1.20	0.71

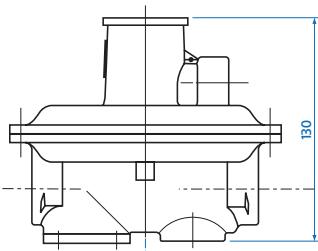

Specific gravity or relative density (air = 1, non-dimensional value)

To calculate the correction factor for gases not listed above, the specific gravity (d) of the gas should be taken and used in the following formula:

$$\text{Correction factor} = \sqrt{\frac{0.6}{d}}$$

► Mod. 1211-1212 - Weight 1.1 Kg

► Mod. 1210 - Weight 1 Kg

## Installation

Gas must flow through the valve body in the same direction as the arrow cast on the body. The RB 1200 regulator can be mounted in any position. The set point shall be slightly adjusted when the regulator position makes the loading spring not to be vertical pointing upwards.

When changing the connection style (in-line or angle) ensure there are no leaks and that all connections are tight.

► Typical meter box installation

know-how makes the difference

# Pressure Regulator RB 2000

- ▶ Balanced valve design eliminates inlet pressure effect
- ▶ Rugged construction for durability
- ▶ Rapid response to load changes
- ▶ Integral shutoff valve
- ▶ Internal relief
- ▶ Inlet strainer

▶ Pressure Regulator RB 2011

## Applications

The RB 2000 regulator is designed for commercial and small industrial applications, and all installations with continuous consumption or rapid flow rate variations, such as burners, industrial ovens, boilers... It is suitable for installation in cabinets, as a space saving regulator.

## Description

The RB 2000 regulator is a direct-acting, spring-loaded regulator (lever type) with an integrated relief valve and optional safety shut-off device.

The balanced valve ensures constant outlet pressure when the upstream pressure varies. This eliminates changes to the orifice size arising from different inlet pressure ranges. The regulator is equipped with a built-in filter (filtration grade 0.5 mm).

The safety shutoff valve cuts the gas flow when the outlet pressure exceeds the set pressure (OPSO) or when it drops below the set value (UPSO). It remains closed until the valve is manually reset.

The relief valve avoids triggering the safety shutoff valve in case of thermal expansion, transient surges of pressure and creep leaks from regulator. The relief pressure is pre-set from factory.

## Technical features

Maximum inlet pressure	10 bar
Outlet pressure	5 mbar – 180 mbar Extended range up to 750 mbar
Accuracy & lock-up pressure	Up to AC5 / up to SG 10
Operating temperature	-20°C to +60°C
Ambient temperature	-30°C to +60°C (body material)
Acceptable gases	Natural gas, town gas, propane, butane, air, nitrogen or any non-corrosive gas
Installation	Horizontal or vertical
Safety devices	Standard relief valve Optional built-in safety shut-off valve: - over-pressure shut-off (OPSO) - under-pressure shut-off (UPSO)
Options	Internal or external sensing line Monitor version

## Sizes & Connections

2 bar	105	104	130	120	110
4 bar	80	80	78	80	75
5 bar	75	80	78	75	75
8 bar	72	70	65	60	58
10 bar	70	65	62	60	55

Maximum capacities at 10 % drop.

► The values given are those for appropriately sized pipe work.

► The flow capacity of the regulator without a safety shut-off device is 5 % higher.

## Wide-open flow coefficient

The wide-open flow capacity can be calculated using the following formula:

- In critical flow conditions: If  $(P_u/P_d) > 2$   $Q = K_G P_u/2$
- In non-critical flow conditions: If  $(P_u/P_d) \leq 2$   $Q = K_G \sqrt{P_d(P_u-P_d)}$

Orifice Size	7 mm	11 mm	13 mm	14 mm
$K_G$	40	100	140	160

### where:

$Q$  = maximum flow capacity ( $\text{Sm}^3/\text{h}$ )

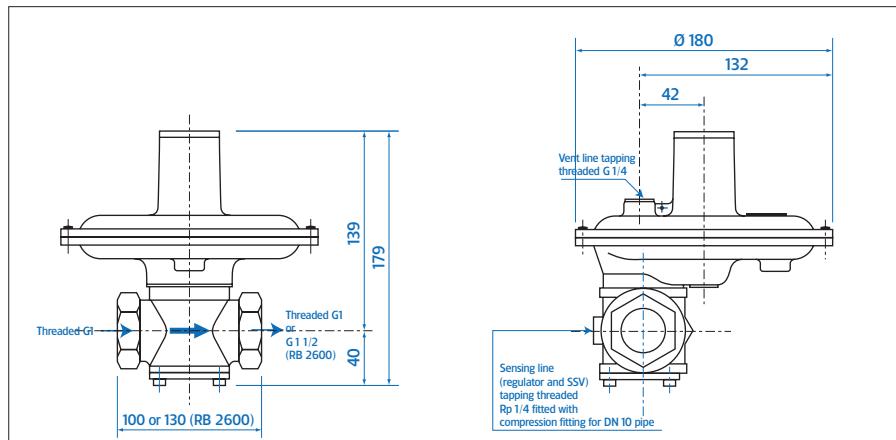

$P_u$  = absolute inlet pressure (bar)

$P_d$  = absolute outlet pressure (bar)

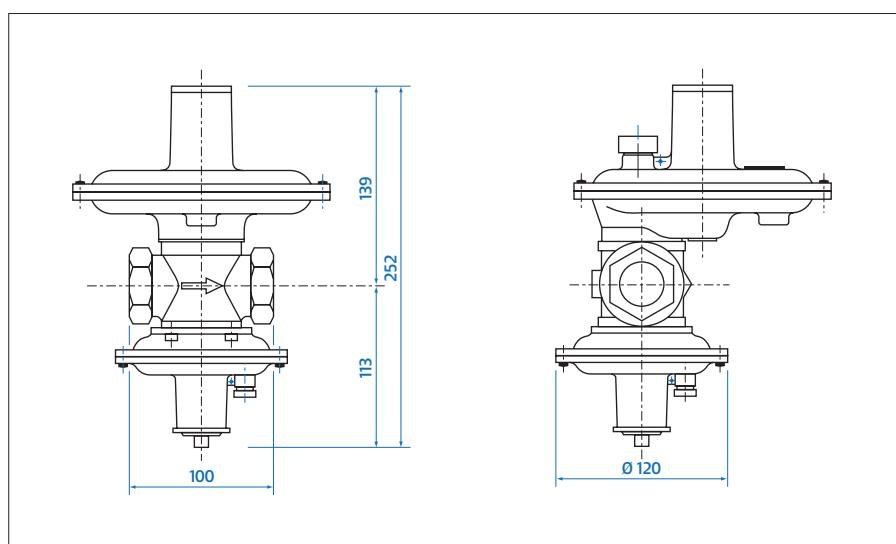

$K_G$  = flow coefficient

## Overall Dimensions (in mm)

► RB 2000  
without safety shut-off valve  
Weight 2 kg

► RB 2000  
with safety shut-off valve  
Weight 2.5 kg

### Information to be specified when ordering:

- Regulator type code
- Minimum and maximum inlet pressures
- Outlet pressure range
- Outlet pressure setting
- Maximum flow rate
- OPCO setting\*
- UPCO setting\*
- \* (if requested)

## Installation

- The RB 2000 regulator can be mounted in any position, horizontal or vertical
- RB 2000 can be used as monitor regulator, upstream to an active regulator. The external sensing line shall then be connected downstream to the regulator to be controlled.

# Pressure Regulator RB 3200

- ▶ Balanced valve design eliminates inlet pressure effect
- ▶ Rugged construction for durability
- ▶ Rapid response to load changes
- ▶ Integral shutoff valve
- ▶ Internal relief
- ▶ Inlet strainer

## Applications

The RB 3200 regulator is designed for commercial and small industrial applications, and all installations with continuous consumption or rapid flow rate variations, such as burners, industrial ovens, boilers... It is suitable for installation in cabinets, as a space saving regulator.

## Description

The RB 3200 regulator is a direct-acting, spring-loaded regulator (lever type) with an integrated relief valve and optional safety shut-off device.

The balanced valve ensures constant outlet pressure when the upstream pressure varies. This eliminates changes to the orifice size arising from different inlet pressure ranges. The regulator is equipped with a built-in filter (filtration grade 0.5 mm).

The safety shutoff valve cuts the gas flow when the outlet pressure exceeds the set pressure (OPSO) or when it drops below the set value (UPSO). It remains closed until the valve is manually reset.

The relief valve avoids triggering the safety shutoff valve in case of thermal expansion, transient surges of pressure and creep leaks from regulator. The relief pressure is pre-set from factory.

## Technical Features

Maximum inlet pressure	10 bar
Outlet pressure	7 mbar – 160 mbar Extended range up to 350 mbar
Accuracy & lock-up pressure	Up to AC5 / up to SG10
Operating temperature	-20°C to +60°C
Ambient temperature	-30°C to +60°C (body material)
Acceptable gases	Natural gas, town gas, propane, butane, air, nitrogen or any non-corrosive gas
Installation	Horizontal or vertical
Safety devices	Standard relief valve Optional built-in safety shut-off valve: – over-pressure shut-off (OPSO) – under-pressure shut-off (UPSO)
Sensing line	External

## Size and Connections

Size	1" x 1"1/2

0.5 bar	145	140	120	110	62	46
0.7 bar	175	170	150	145	80	70
1 bar	230	210	180	170	105	100
1.5 bar	300	270	230	230	180	170
2 bar	380	330	280	280	260	260
4 bar	680	540	530	530	490	490
7 bar	950	870	850	850	800	800
10 bar	950	870	850	850	850	800

Maximum capacity at 20 % drop

- The values given are those for appropriately sized pipe work.
- The flow capacities of the regulator without a safety shut-off device are approximately 15 % higher.

## Fault Capacity

For a 0.6 specific gravity gas, the wide-open orifice flow (Q) may be calculated using the following equations:

- Sub-critical flow behavior, where  $P_u - P_d \leq 0.5 P_u$  
$$Q = 300 \sqrt{P_d(P_u - P_d)}$$
- Critical flow behavior, where  $P_u - P_d > 0.5 P_u$  
$$Q = 300 P_u / 2$$

## Installation

- The RB 3200 regulator can be mounted in any position, horizontal or vertical
- RB 3200 can be used as monitor regulator, upstream to an active regulator. The external sensing line shall then be connected downstream to the regulator to be controlled.

### Information to be specified when ordering:

- Regulator type code
- Maximum inlet pressure
- Outlet pressure range
- Outlet pressure setting
- OPCO setting\*
- UPCO setting\*
- \* if requested

### Standard conditions:

- Absolute pressure of 1.013 bar
- Temperature of 15°C

### where:

- $Q$  = maximum flow capacity (Sm<sup>3</sup>/h)  
 $P_u$  = absolute inlet pressure (bar)  
 $P_d$  = absolute outlet pressure (bar)  
 $K_G$  = flow coefficient

### Correction factor for non-natural gas applications:

The flow rates are indicated or a 0.6 specific gravity gas.

To determine the volumetric flow rate for gases other than natural gas, the values in the capacity tables should be multiplied or calculated using the sizing equations with a correction factor. The table below lists the correction factors for some common gases:

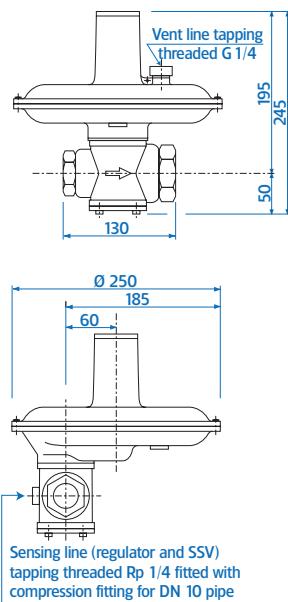

Gas type	Specific gravity	Correction factor
Air	1.00	0.77
Butane	2.01	0.55
Carbon dioxide (dry)	1.52	0.63
Carbon monoxide (dry)	0.97	0.79
Natural gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air mix	1.20	0.71

Specific gravity or relative density  
(air = 1, non-dimensional value)

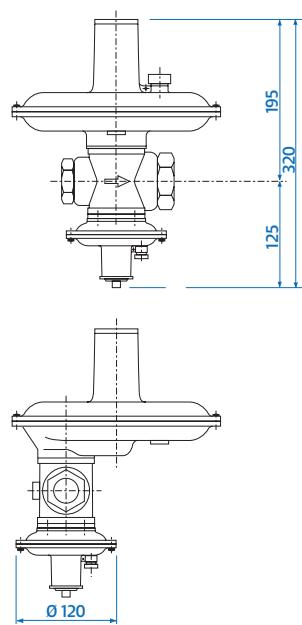

To calculate the correction factor for gases not listed above, the specific gravity (d) of the gas should be taken and used in the following formula:

$$\text{Correction factor} = \sqrt{\frac{0.6}{d}}$$

## Overall Dimensions (mm)

► Model: 3210 - Weight: 4.5 kg.

► Models: 3211 / 3212 - Weight: 4.9 kg.

## Outlet Pressure Range

### Regulator

Spring code	Spring Characteristics				Spring Range 3210/11/12 Ø 250 mbar	Spring Range 3210/11/12 TR Ø 250 mbar

2056519	1,4	10	30	10	-	150 - 300

## Relief Valve

The built-in relief valve is set 10 mbar (head 250) or 50 mbar (head 250 TR) above outlet pressure setting. Other settings on request.

### Spring characteristics:

d : wire diameter  
De : external diameter  
Lo : height  
It : number of spires

# Gasdruk regelaars

## Type: 133 & 233

- Ruime toepassing,  
door verwisselbare zittingen
- Kan in alle posities geïnstalleerd  
worden
- Door modulaire opbouw kunnen  
er delen vervangen worden  
zonder het huis uit de leiding te  
demonteren.
- Goedgekeurd door DVGW

### Toepassing

De 133 en 233 regelaars zijn ontworpen voor huishoudelijk en industriële toepassing, zoals fabrieken, verwarminginstallaties en overige installaties waar een accurate druk regeling, gemakkelijke instelling en snelle reactietijd benodigd zijn. (branders, industriële ovens, boilers, enz)

### Beschrijving

De 133 en 233 regelaars zijn direct werkende, veer gestuurde regelaars met geïntegreerde afslagveiligheid. Door een grote keuze aan zittingen maakt het een goede afstemming mogelijk met de verschillende capaciteiten en inlaat druk. Het toegepaste hefboom mechanisme zorgt voor een exacte uitgangsdruk en korte reactietijd bij varierende capaciteit. Het type 133 en de geflensde versie, type 233 zijn uitgevoerd met een ingebouwd filter element (maaswijdte: 0,5mm).

### Technische Specificaties

<b>Maximum toegestane inlaatdruk</b>	8,0 bar
<b>Uitlaatdruk</b>	10 mbar- 0,7 bar
<b>Nauwkeurigheid &amp; sluitdruk</b>	Tot AC5/ Tot SG10
<b>Bedrijf temperatuur</b>	Gas: -20°C tot +60°C
<b>Geschikt voor</b>	Aardgas, propaan, butaan, lucht, stikstof en niet agressieve gassen
<b>Veiligheid</b>	Aangebouwd aan regelaar (Optioneel) - Opso: overdruk beveiliging - Upso: onderdruk beveiliging
<b>Optioneel</b>	Veiligheidmembraan Ablaas veiligheid

### Aansluitingen

<b>Doorlaat</b>	DN25, DN40, DN50
<b>Afmetingen</b>	Zie tabel pagina 3
<b>Flenzen</b>	PN16, ANSI 150
<b>Draadaansluiting</b>	G 3/4", G1", G 1 1/2"

### Materiaal

<b>Huis</b>	Nodular gij GGG40, DIN 1693
<b>Regelunit</b>	Gegoten aluminium GD-Al Si 12, DIN1725
<b>Afslagunit</b>	Messing
<b>Onderdelen</b>	Messing /staal, zink gecoat
<b>Afdichtingen</b>	NBR rubber / Viton
<b>Membraan</b>	NBR rubber/ NBR rubber, verstevigd

► Drukregelaar 233

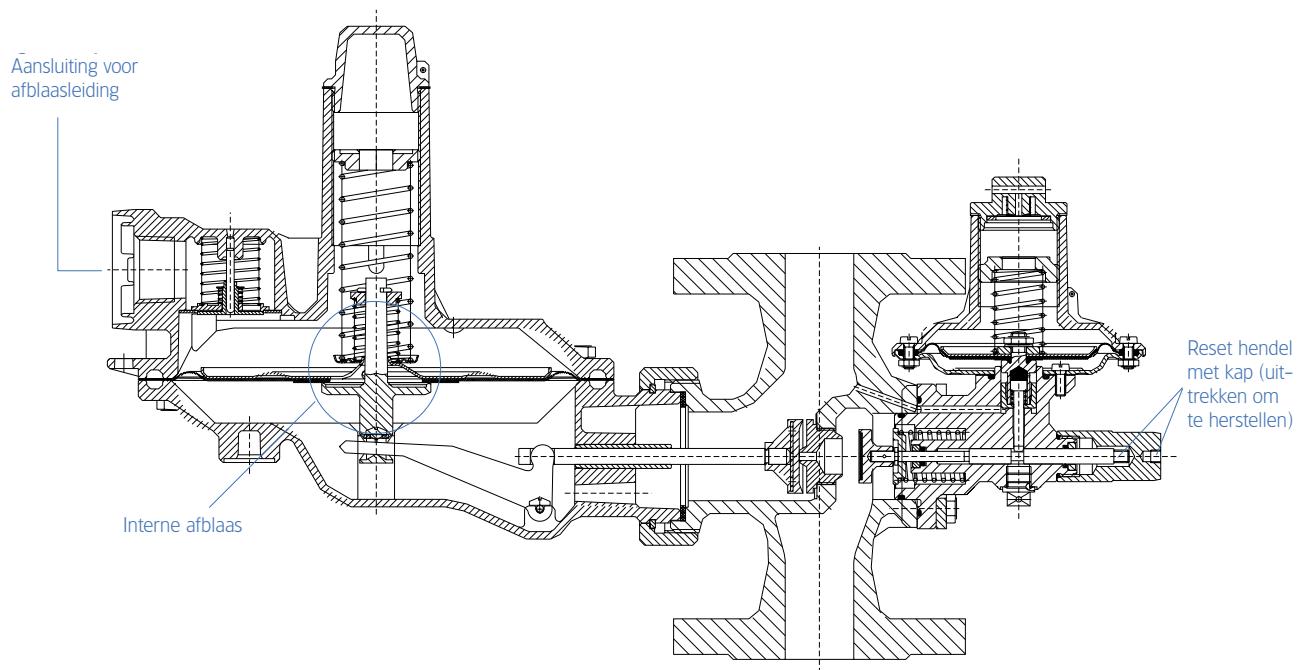

Fig.1: 133 regelaar met afslagveiligheid 033 en interne ontluchtingsklep

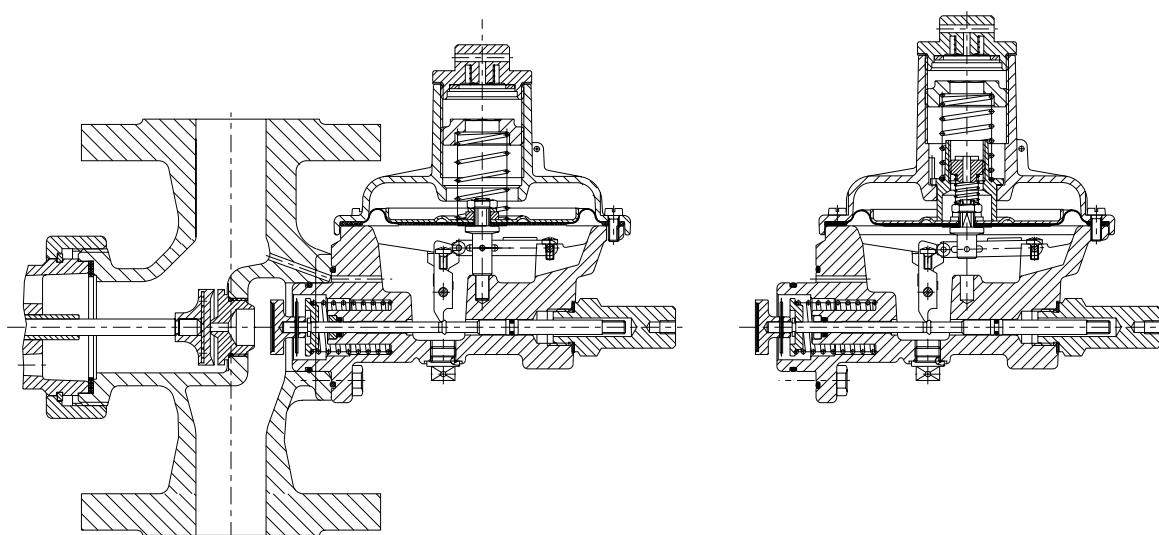

Fig.2: Afslagveiligheid type I

Fig.3: Afslagveiligheid type II

## Doorlaat en regeleenheid

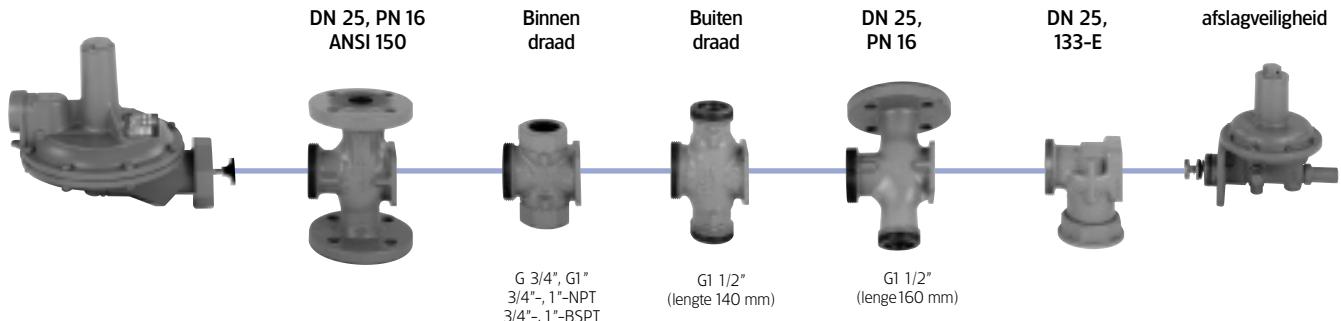

Selecteren van de regeleenheid

Regelaar	Type	Instel bereik (W <sub>h</sub> )
Type	regelunit	
133		8 - 210 mbar
	-HP	140 - 420 mbar
233	-12	8 - 210 mbar
	-8	30 - 450 mbar
	-8HP	420 - 700 mbar

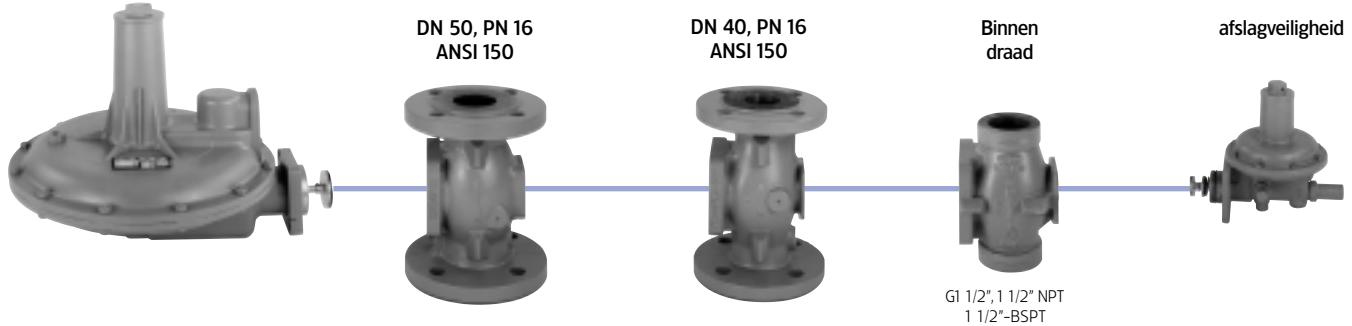

De 133 en 233 regelaar zijn verschillendruk regelaars . De ontwerp druk van de regelaars is lager dan 8 bar, maar niet lager dan de maximum druk welke kan optreden bij een storing.

Doorlaat afmetingen

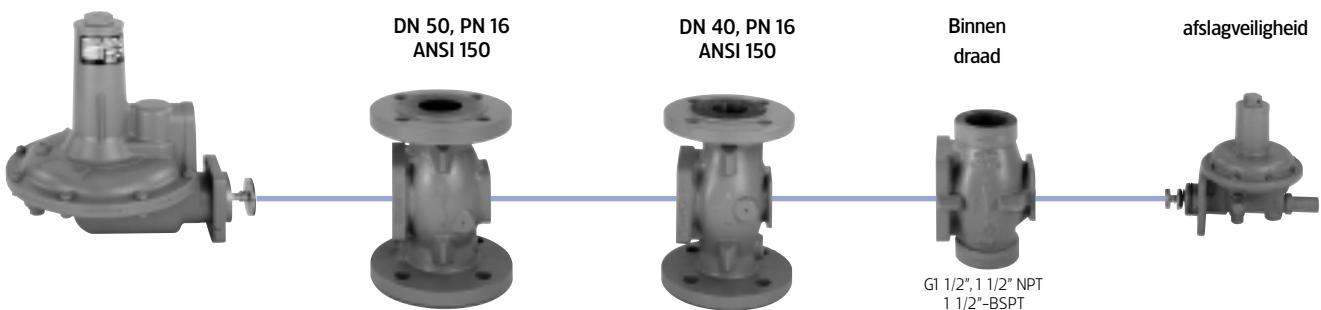

### Type 133

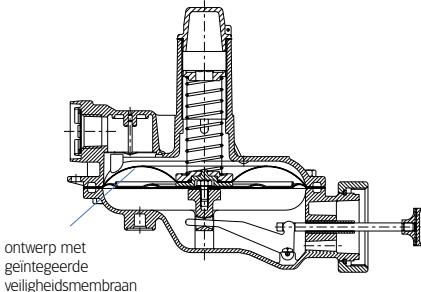

### Type 233-12

### Type 233-8

## Speciale opties

► **Gasgebrek beveiliging:** Deze beveiliging is beschikbaar voor de regelaar, type 133-77(0) en vervangt de UPSO veiligheid. Als de uitlaatdruk inzakt (50% van de ingestelde waarde), zal de gasgebrek beveiliging worden aangesproken en de klep dichtgaan. Dit zorgt ervoor dat de gasstroom onderbroken wordt. Via een lekkanaal blijft er een verbinding bestaan met de uitlaatzijde. Wanneer er geen gasafname is zal de druk via dit lekkanaal weer opgebouwd worden. Als de druk hoog genoeg is zal de klep weer open gaan. De uitlaatdruk kan onbedoeld inzakken, doordat de inlaatdruk inzakt of doordat de afname hoger is dan de maximale capaciteit van de regelaar.

*De gasgebrekbeveiliging kan niet toegepast worden bij een inlaatdruk hoger dan 1 bar.*

► **Veiligheidsmembraan:** Deze optie biedt bescherming bij een scheur of een lek in het hoofdmembraan. Het veiligheids membraan beperkt de doorstroom naar de afblaas opening tot een 30 liter per uur. Als er een groot lek in het hoofdmembraan zit, zal de uitlaatdruk met 50% stijgen, hierdoor wordt de overdrukbeveiliging (OPSO) aangesproken. *Een veiligheidsmembraan kan niet toegepast worden bij een inlaatdruk hoger dan 1 bar.*

► **Externe stuurleidingen:** Regelaars, type 133 en 233 zijn voorzien van een interne stuurleiding. Dit zorgt voor het optimaal functioneren van de regelaar. Echter externe stuurleidingen worden aangeraden bij een ingangsdruk hoger dan 4 bar. De interne stuurleiding zal

## Afblaas instelling:

Met de standaard afblaasveer zal deze op 30 mbar boven de uitgangsdruk afblazen. Met een nauwkeurigheid van 10%.

## Selecteren van de afslagveiligheid

Type	Max. druk	Functie	Bereik	
			$W_{ho}$	$W_{hu}$
033	Verschil druk	OPSO (overdruk)	40 mbar to 0.45 bar	-
I	Verschil druk	OPSO (overdruk)	20 mbar to 1.0 bar	-
II	Verschil druk	OPSO(overdruk)& UPSO (onderdruk)	20 mbar to 1.0 bar	8 to 50 mbar

Opmerking : De OPSO en UPSO worden separaat ingesteld.

**Temperatuur beveiliging:** (brand beveiliging)  
Elke afslagveiligheid is voorzien van een temperatuur "zekering". Deze zorgt ervoor dat de klep van de beveiliging dicht gaat bij een hoge temperatuur (tussen 180 en 200°C).

**DVGW aanbeveling m.b.t. veiligheid:** De regelaars type 133 & 233 zijn gekeurd door de Duitse keuringsinstantie DVGW. De keuring is gerelateerd aan de Duitse regelgeving en condities voor veiligheid en gas installaties.

- Inlaatdruk onder de 6 bar
- OPSO en UPSO afslagveiligheden zijn benodigd wanneer de inlaatdruk boven de 4 bar komt.

► Druk regelaar type:133

De capaciteiten welke **dik** gedrukt zijn, voldoen niet aan de opgegeven nauwkeurigheid.

**Het is niet toegestaan de orifice te gebruiken als in de tabel een ■ geplaatst is.**

**Standaard condities zijn:**

- Absolute druk 1.013 bar
- Temperatuur van 15°C

**Correctie factor van toepassing bij andere gassen dan natuurlijk aardgas:**

De capaciteiten zijn opgegeven voor een gas met een dichtheid van 0,6. Om capaciteit te bepalen van de regelaar bij gassen met andere dichtheid, zal de capaciteit welke aangegeven is in de tabel vermenigvuldigd of gedeeld worden met de correctie factoren uit de tabel.

De tabel hieronder geeft de correctiefactor voor een aantal bekende gassoorten.

Gas soort	Relatieve dichtheid	Correctie factor
Lucht	1.00	0.77
Butaan	2.01	0.55
Koolstof dioxide	1.52	0.63
Koolstof monoxide	0.97	0.79
Aardgas	0.60	1.00
Stikstof	0.97	0.79
Propaan	1.53	0.63
Propaan-lucht mengsel	1.20	0.71

Voor de gassen welke niet hierboven staan vermeld, zal de correctie factor erkend dienen te worden.

De relatieve dichtheid (d) dient ingevuld te worden in onderstaande formule.

$$\text{correctie factor} = \sqrt{\frac{0.6}{d}}$$

Bij toepassing van externe stuurleidingen (optioneel), wordt de regelaar voorzien van de volgende koppelingen  
 - Op de regelaar: Ermeto 12,  
 - Op de SSV: Ermeto 8.

## Montage positie

Houdt bij bestelling rekening met de gewenste uitvoering. Indien niet anders aangegeven, worden de regelaars standaard geleverd voor normale omstandigheden(positie 2):

- Regelaar 133-met uitwendige ventilatie opening,
- Regelaar 233-inwendige ventilatie opening.

Pos.3 en Pos.4 zijn niet leverbaar in DN 50 geflensde uitvoering voor de 233, als de 033 SSV is gemonteerd.

## Installatie

- Membraan huis kan in iedere positie (360 °) tot het huis gemonteerd worden
- Voor buiten installatie , plaats de ventilatie opening zodanig dat regen, sneeuw, vocht of andere deeltjes niet in de opening kunnen komen  
Opmerking: Actaris adviseert om de ventilatie opening te allen tijde aan de onderzijde van de regelaar te positioneren. Verder moet de ventilatie opening afgewend zijn van dakranden van gebouwen, deurenopeningen, luchtinlaten of boven een eventueel sneeuw niveau.  
De ademopening moet periodiek gecontroleerd worden.
- Voor binneninstallatie moet de kortste lengte met buiten met de navolgende diameters :  
Tot 3 meter DN 20  
Tot 5 meter DN 25  
Boven de 5 meter tenminste DN 40.  
Het einde van de uitlaat pijp moet afgeschermd zodat vuil of vocht niet kunnen binnendringen.
- De duitse DVGW staat geen pijpwerk toe bij een binnen installatie, bij een regelaar met een veiligheidsmembraan welke niet boven de 1 bar komt.

know-how makes the difference

# Pressure Regulator RR 16

- ▶ Integral resistance
- ▶ Cartridge type diaphragm and valve assembly for ease of maintenance
- ▶ Wide range of interchangeable orifices
- ▶ Approved by German DVGW

## Applications

The RR 16 regulator is designed for industrial use: gas supply networks, district stations, industries, heating plants, as well as for all installations where accurate pressure control, easy adjustment and fast response times are required, such as for burners, industrial ovens, boilers etc.

## Description

The RR 16 regulator is a direct-acting, spring-loaded regulator with an optional integrated safety shutoff device. The balanced valve ensures constant outlet pressure when the upstream pressure varies.

## Technical Features

Maximum inlet pressure	16.0 bar
Outlet pressure	10 mbar - 1.1 bar
Accuracy & lock-up pressure	Up to AC5 / up to SG 10
Operating temperature	Gas: -20° C to +60° C Ambient: -30°C to + 60°C
Acceptable gases	Natural gas, propane, butane, air, nitrogen and all non-corrosive gases
Safety devices	Optional built-in safety shutoff valve OPSO: Over-pressure shut-off UPSO: Under-pressure shut-off
Options	Integral silencer Monitor version

## Connections

Sizes	DN 25, DN 50, DN 80
Body lengths	See Table page 8
Flanges	PN 16

## Materials

Body	Spheroidal graphite cast iron GGG 40, DIN 1693
Actuator	Steel St 37-2,DIN 1652/2 and DIN 17100 (epoxy protected)
SSV Actuator	Brass, steel and aluminium
Internal parts	Steel, zinc-coated / Stainless steel
Seals	NBR rubber / Viton
Diaphragm	NBR rubber / NBR rubber, reinforced fabric

▶ Pressure Regulator RR 16

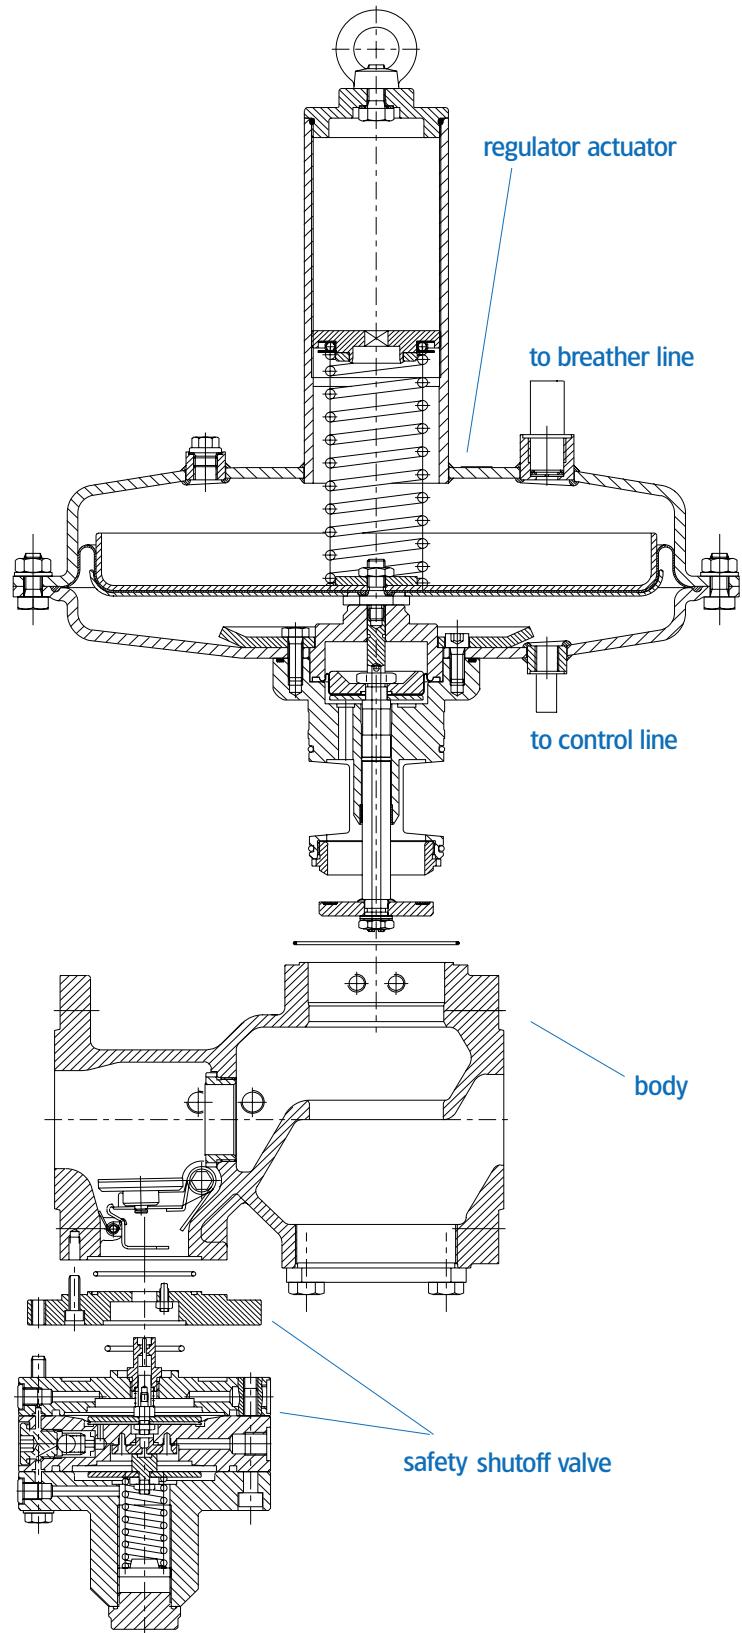

Fig. 1: RR16 regulator with SL-IZ safety shutoff valve - Sectional view

## Safety Shutoff Valve

### Selecting the SSV

SSV	Max. Operating Pressure	Function	Range	
Type	Pressure		Who	Whu
SL-I2	Integral resistance 16 bar	OPSO	35 mbar to 1.7 bar	
033	5 bar	OPSO	40 mbar to 0.45 bar	
022	Integral resistance 16 bar	OPSO and UPSO	40 mbar to 1.7 bar	10 to 220 mbar
SID	Integral resistance 16 bar	OPSO and UPSO with high accuracy trigger	30 bar to 1.7 bar	5 mbar to 1.5 bar

Note that OPSO and UPSO settings are adjustable **separately**.

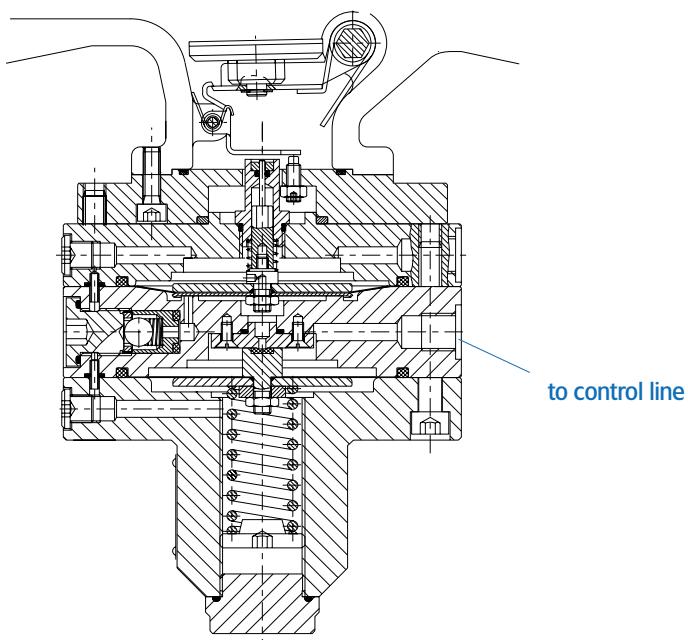

Fig. 2: Type SL-I2 Safety Shutoff Valve - Sectional view

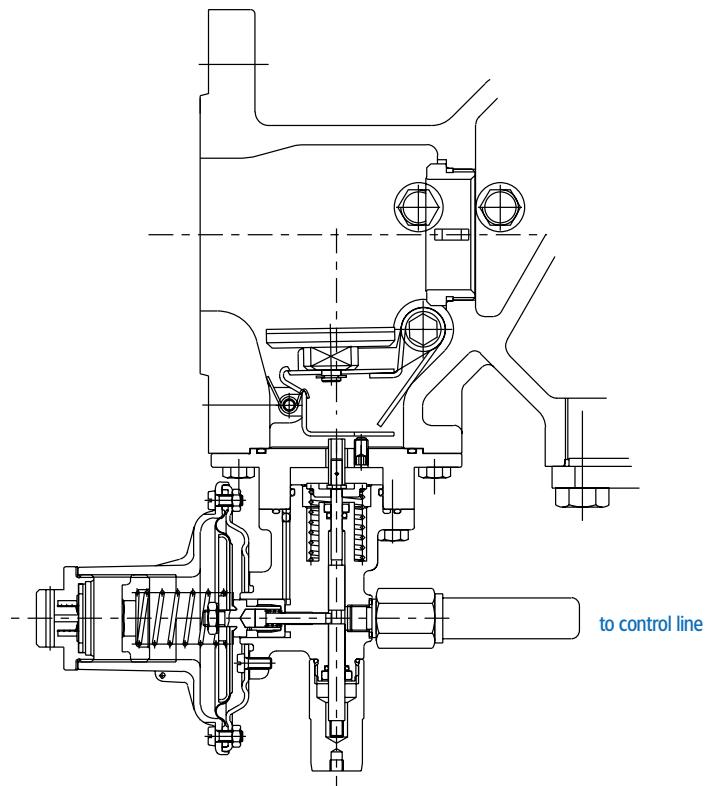

Fig. 3: Type 033 Safety Shutoff Valve – Sectional view

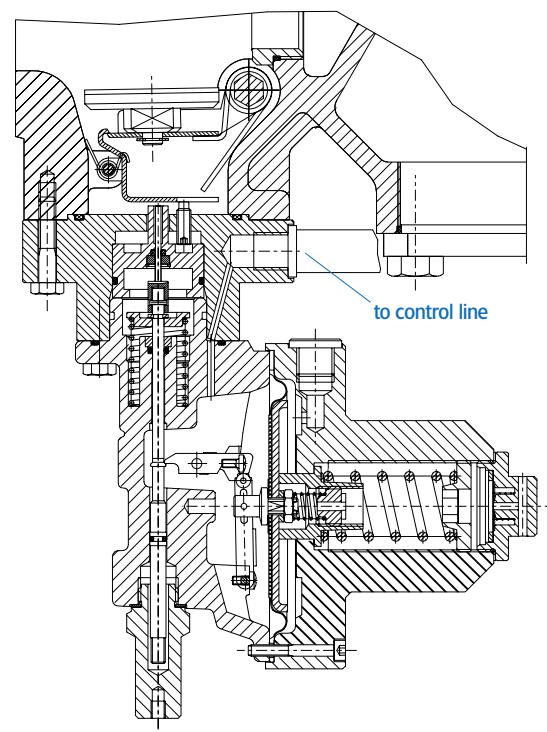

Fig. 4: Type 022 safety shutoff valve – Sectional view

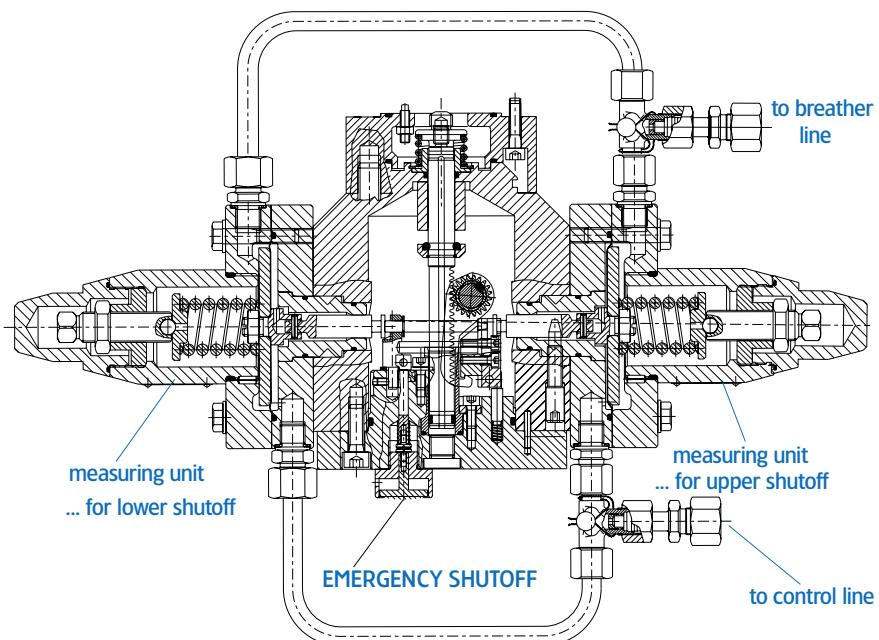

Fig. 5: Type SID Safety shutoff Valve - Sectional view

## Outlet Pressure Range

### Regulator

**Note:**

- For better accuracy, choose the largest actuator size.
- 8N actuator offers a reduced overall dimension for compact installation.

Size	Actuator size	Spring code	Spring color	Wire (Ø mm)	Spring range
DN 25	8N Ø 310	955-202-70	red	3	10 - 25 mbar
		955-202-77	brown	3.8	20 - 55 mbar
		955-202-78	blue	4.5	45 - 110 mbar
		955-202-79	green	5.6	90 - 230 mbar
		955-202-80	orange	6.3	200 - 330 mbar
		955-202-81	black	7	300 - 450 mbar
	8H Ø 310	955-202-82	yellow	9.5	300 - 650 mbar
		955-202-83	grey	11	600 - 1100 mbar
	12N Ø 405	955-202-77	brown	3.8	10 - 25 mbar
		955-202-78	blue	4.5	20 - 55 mbar
		955-202-79	green	5.6	45 - 115 mbar
		955-202-80	orange	6.3	100 - 160 mbar
		955-202-81	black	7	150 - 225 mbar
DN 50 & 80	8N Ø 310	955-202-79*	green	5.6	90 - 230 mbar
		955-202-80	orange	6.3	200 - 330 mbar
		955-202-81	black	7	300 - 450 mbar
		955-203-73**	red	8.0	130 - 350 mbar
	8H Ø 310	955-202-82	yellow	9.5	300 - 650 mbar
		955-202-83	grey	11	600 - 1100 mbar

\* When the regulator is fitted with this spring, the accuracy class becomes AC 20 instead of AC 10.

\*\* Special spring

### Accuracy Class (AC), lock-up pressure class (SG) and lock-up pressure zone (SZ):

- 10 - 20 mbar: AC 20 / SG 30
- 20 - 100 mbar: AC 10 / SG 20
- > 100 mbar: AC 5 / SG 10

The typical lock-up pressure zone is SZ 10. Reduced zone is available on request.

## Safety Shutoff Valves

### 022

Variant	Spring code	Spring color	Wire (Ø mm)	Spring range
Over Pressure Shutoff (OPSO)	955-200-22	red	1.4	20 - 60 mbar
	955-200-23	blue	1.6	50 - 120 mbar
	955-200-24	green	2.6	100 - 450 mbar
	955-203-41	black	3.2	0.35 - 1.0 bar
	955-203-42	yellow	4.0	0.8 - 1.7 bar
Under Pressure Shutoff (UPSO)	955-200-32	red	0.8	10 - 50 mbar
	955-203-51	brown	1.25	40 - 120 mbar
	955-203-52	yellow	1.6	100 - 220 mbar

### 022 Accuracy Class (AC):

- OPSO:
  - 40 - 400 mbar: AG 10
  - 0.4 - 1 bar: AG 5
  - 1 - 1.7 bar: AG 2.5
- UPSO
  - 10 - 20 mbar: AG 30
  - 20 - 220 mbar: AG 20

### ► Minimal difference between regulator and SSV settings ( $\Delta P_W$ ):

- 10 mbar to UPSO
- 20 mbar to OPSO

## Outlet Pressure Range (cont'd)

Safety Shutoff Valves (cont'd)

**033**

### SL-IZN.1 and SL-IZM.1

SL-IZ Type Over Pressure Shutoff (OPSO)	Spring code	Spring color	Wire (Ø mm)	Spring range
IZN.1 head	955-202-36	red	1.8	35 - 250 mbar
	955-202-37	green	2.5	200 - 800 mbar
IZM.1 head	955-202-38	yellow	3.6	0.6 - 1.7 bar

**SL-IZN.1 Accuracy class (AG):**

- OPSO:
  - 35 - 100 mbar: AG 10
  - 100 - 800 mbar: AG 5
- Minimal difference between regulator and SSV settings ( $\Delta P_w$ ):
  - 20 mbar to OPSO

**SL-IZM.1 Accuracy class (AG):**

- OPSO:
  - AG 5
- Minimal difference between regulator and SSV settings ( $\Delta P_w$ ):
  - 20 mbar to OPSO

### SID

SID Type Overpressure & Underpressure Shutoff	Spring code	Spring color	Wire (Ø mm)	Spring range
N head	955-201-65	black	3.2	5 - 110 mbar
	955-201-66	green	4.0	80 - 220 mbar
M head	955-201-65	black	3.2	100 - 250 mbar
	955-201-66	green	4.0	200 - 470 mbar
	955-201-67	brown	5.6	0.45 - 1.5 bar
	955-201-68	black	6.0	1 - 1.7 bar

**SID-N head Accuracy class (AG):**

- OPSO:
  - 20 - 40 mbar: AG 10
  - 40 - 220 mbar: AG 5
- UPSO
  - 5 - 20 mbar: AG 30
  - 20-220 mbar: AG 20
- Minimal difference between regulator and SSV settings ( $\Delta P_w$ ):
  - 10 mbar to UPSO, 20 mbar to OPSO

**SID-M head Accuracy class (AG):**

- OPSO:
  - 10 - 450 mbar: AG 10
  - 450 - 1000 mbar: AG 5
  - 1 - 1.7 bar: AG 1
- UPSO:
  - 100 - 450 mbar: AG 20
  - 0.45 - 1.7 bar: AG 5
- Minimal difference between regulator and SSV settings ( $\Delta P_w$ ):
  - 10 mbar to UPSO, 20 mbar to OPSO

## Flow Capacity

### Standard conditions:

- Absolute pressure of 1.013 bar
- Temperature of 15°C

### Flow Coefficient

The RR 16 regulator can be fitted with an orifice of various sizes in order to match the capacity requirements. Large size orifices offer extra-large flow rate possibilities, but are not recommended for high inlet pressures.

Regulator	Orifice size	Max. Inlet pressure	Flow* coefficient Kg
DN 25	24 mm	16 bar	210
	31 mm**	16 bar	430
DN 50	24 mm	16 bar	450
	31 mm**	16 bar	580
	42 mm**	16 bar	1000
DN 80	54 mm	5 bar	1440
	42 mm	16 bar	1400
	54 mm**	16 bar	2300
	82 mm	4 bar	3440

\* The flow coefficient is calculated for a regulator in a fully opened position.

\*\* When using this orifice, the accuracy classes as indicated page 6 are valid if the inlet pressure variation does not exceed 10 bar.

### Sizing Equation

For a 0.6 specific gravity gas; the volumetric flow rates (Q) may be calculated using the following equations with an error less than 10 %:

- Sub-critical flow behavior,

$$Q = \sqrt{P_a (P_e - P_a)}$$

where  $(P_e - P_a) < 0.5 P_e$

- Critical flow behavior,

$$Q = K_g \frac{P_e}{2}$$

where  $(P_e - P_a) > 0.5 P_e$

Where:

Q: volumetric flow rate in m<sup>3</sup>/h at standard conditions

P<sub>e</sub>: inlet absolute pressure in bar

P<sub>a</sub>: outlet absolute pressure in bar

Do not operate orifice in inlet pressure area marked with ■.

### Correction factor for non-natural gas applications:

The flow rates are indicated for a 0.6 specific gravity gas.

To determine the volumetric flow rate for gases other than natural gas, the values in the capacity tables should be multiplied or calculated using the sizing equations with a correction factor.

The table below lists the correction factors for some common gases:

Gas type	Specific gravity	Correction factor
Air	1.00	0.77
Butane	2.01	0.55
Carbon dioxide (dry)	1.52	0.63
Carbon monoxide (dry)	0.97	0.79
Natural gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air mix	1.20	0.71

Specific gravity or relative density (air = 1, non-dimensional value)

To calculate the correction factor for gases not listed above, the specific gravity (d) of the gas should be taken and used in the following formula:

$$\text{Correction factor} = \sqrt{\frac{0.6}{d}}$$

**Note:** Flow rates indicated in these tables meet the accuracy of ± 10% of outlet gauge pressure.

Device designation example: **RR16-50-31-12N-SL-IZN.1**

## Options

- **Monitor application:** special balanced stem for regulator installed in upstream monitor position.
- **Silencer:** noise abatement device around the valve seat to reduce the sound pressure level by around 10 dbA.
- **Valve trave indicator**

### SSV options

- Valve position **switch:** Ex proximity switch
- Emergency push-**button**
- **Remote trigger:** with explosion-proof solenoid valve
